

CYNGULAR® – AI BASED PATIENT ENGAGEMENT & RETENTION SOLUTION

Fairfax Station VA 22039 Jul 09, 2024 -- ([newswire.com](https://www.newswire.com)) - Epilog Health LLC, established in 2009 is a national provider of clinical documentation solutions in the healthcare segment. Epilog announced the formal launch and availability of Cyngular® - its AI-based application software focused on Patient Engagement, Patient Retention, Patient Monitoring and Population Health Data capture.

Cyngular® is designed to be a simple, highly accessible, and cyber-secure application. It is a complementary solution and fits between EMR-based patient portals and at-home care delivery applications integrated with specific monitoring devices.

Key benefits offered by Cyngular® include:

1. Easy, at-home patient access via PC, Mac and Smartphone
2. Does not require specific monitoring devices
3. Offers Spanish and English patient user interfaces
4. Provides for Patient Vital Signs reporting and Medication management
5. Software runs at healthcare facility data center (behind firewall), protecting patient information
6. Integrates with healthcare facilities EMR (EPIC, Cerner, Meditech, CPSI/Evident and others) systems for Population Health Data processing
7. Supports enrollment and tracking of Capitation patients

“Healthcare solutions are on a fast track with AI and related technologies. Our goal is to deploy these technologies transparently and capture almost 80%+ of at-home patients for client healthcare facilities. Offering simple, interactive communication with at-home patients about their vital signs and medication management is a key for healthcare facilities to retain their patients. Cyngular® is delivering on these outcomes.” said A.K. Jay Jaiswal, CEO of Epilog Health. “Making it cost affordable, cyber-secure and able to reach the largest patient demographics with dual language support makes our solution stand out.” he continued.

Recent client deployments are reporting better than 75%+ at-home patient participation, significant reduction in patient messaging load resulting from EMR patient portals to physicians and a gradual build of Population Data. Ease of access and use by patients; and information management by existing facility staff are also emerging as outcomes.

Cyngular® is available now. It offers multi-year and highly discounted open licenses covering all client locations (Hospitals, Clinics, Practices and MSO). License includes an all-inclusive fee with no other charges for support, upgrade, EMR integration and customization.
