

Cyngular® | Patient Engagement Solution for healthcare facilities and providers.

The Solutions | A significant gap exists between at-home patients and providers for monitoring health conditions and providing care. The current partial solutions do not adequately address the needs of at-home patients. For providers and healthcare facilities, these are missed opportunities in providing Proactive and Preventive care for at-home patients.

EMR Patient Portals – Every major EMR systems (EPIC, Cerner, Meditech, Tru Bridge, Veradigm and others) provide patient portal. These patient portals fall in the category of ‘visit-follow-up’. Patients manage appointments, obtain medication refills and get results from their visits. The patient communication with facility and providers is limited to the visit (event based or routine check-ups).

Wearable Remote Patient Monitoring – WRPM solutions are available for Remote Patient Monitoring. These solutions require at-home patients to have specific monitoring devices and require patient training in operating this network connected devices. While highly effective these solutions carry a high-cost factor of \$3,000 to \$5,000, they suffer from at-home WIFI network availability and quality. These factors have limited device specific patient monitoring solutions for at-home patients with critical care needs. Demographically, this is 7% of at-home patient population.

Right Solution | Cyngular®, the AI based solution addresses large population of at-home patients currently not addressed by Wearable Remote Patient Monitoring solutions. The solution features of Cyngular® (listed below) are designed to effectively service large segment of at-home patients.

- Does not require specific monitoring devices
- Cost per patient per year averages \$10 or less
- Patient secured WEB access in English and Spanish
- Patient access via PC, MAC, Tablet or Phone
- Collects patient health vital data at defined frequency
- Includes medication management
- Includes patient-provider messaging

Effective implementation, wider-use solution, ease of use and continuous patient engagement are the core features that make Cyngular® highly effective. Cyngular® complements EMR Patient Portals by adding continuous patient engagement.
